Education

B.Tech in AI & ML, TCET (Affiliated to Mumbai University)

9.66 CGPA

Expected June 2027

Work Experience

Full-Stack AI Engineer Intern

February 2026 - Present

Liferythm Healthcare Product

Remote, India

- Architected an Android Native Bridge (Kotlin) integrating SanketLife BLE hardware with React Native for real-time health telemetry.
- Developed low-latency TypeScript healthcare dashboards to render live stethoscope and body composition data.
- **Stack:** React Native, TypeScript, Kotlin, Android SDK, BLE, Gradle, Java.

Full-Stack AI Developer Intern

November 2025 - January 2026

Dr Ratan Sengupta and Associates

Hybrid, India

- Engineered a cross-platform learning ecosystem (Flutter, Node.js, MongoDB) to optimize client workflows.
- Integrated a Botpress AI agent to automate initial client interactions and reduce manual support triage.
- Deployed a real-time admin dashboard for centralized content management and live operational insights.
- **Stack:** Flutter, Node.js, MongoDB, Botpress, Full-Stack Architecture.

Full-Stack AI Developer Intern

August 2025 - November 2025

Xpertpace

Remote, India

- Developed a Flutter-based sales tracking ecosystem to digitize field operations and enable real-time monitoring.
- Built a centralized admin dashboard streamlining workforce management with dynamic itineraries and live alerts.
- **Stack:** Flutter, Mobile App Development, Real-Time Analytics, Workflow Automation.

Projects

S.C.O.P.E. (Secure Cognitive Online Proctoring Ecosystem)

React, Node.js, PostgreSQL, Prisma, Docker, Nginx, Redis, Judge0

- Architected a distributed assessment platform using an Nginx gateway to load-balance traffic across isolated Docker Judge0 child nodes for secure code execution.
- Engineered an asynchronous Redis queue, processing 446,340 requests at 1,487 RPS with a 0% failure rate during DoS load testing.
- Adopted by TCET for institutional placement drives, eliminating manual grading via automated test-case evaluation and real-time Excel analytics with a 7,500 concurrent user capacity.

SG Academy (LMS)

Flutter, Node.js, MongoDB, JWT, Cloudinary, Bayesian Algorithms

- Engineered a secure full-stack LMS and real-time Admin Dashboard, utilizing complex MongoDB schemas for nested modules and JWT/Bcrypt authentication.
- Optimized content discovery via a Bayesian recommendation algorithm and integrated Cloudinary with pdf-lib for scalable media storage and automated certificate generation.

Skills

Programming Languages : Python, Java, HTML, CSS, JavaScript, Java Spring Boot

Coursework : Data Structures & Algorithms, OOP, Operating Systems, System Design, Database Management.

DSA : Arrays, Sliding Window, Two Pointers, Linked List, Recursion, String Manipulation

Libraries/Frameworks : Flutter, Node.js, Express.js, Bootstrap, jQuery, React Js

Tools / Platforms : GitHub, Postman, Figma, Power BI, AWS, Nginx, Redis, Docker

Databases : MySQL, PostgreSQL, MongoDB

Honors, Publications & Leadership

- **Publications:** Co-Author, “IoT-Driven Accessibility Advances” (Springer, In Production).
- **Leadership:** Technical Head at TCET ACM SIGAI, leading a 30+ member tech team.
- **Honors:** Winner, Aether National Conference (2025); Finalist, DIPEX State Exhibition for “Alertica” (2025).
- **Certifications:** Machine Learning A-Z & Full-Stack Web Development Bootcamp.
